Data Modelling and Form Design

Aim

To design and develop an Event Registration Form using Zoho Creator by creating a structured data model, applying appropriate validations, and generating a report for managing event registrations.

Theory

Data modelling and form design involve organizing data into suitable fields and sections for efficient collection and management. In Zoho Creator, forms can be created using different field types such as Name, Email, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.

In this experiment, an **Event_Registration_Form** is designed to collect participant details, contact information, academic details, event information, registration details, and comments. The form is organized into suitable sections for structured data entry.

Validations are applied to ensure accurate data entry, including mandatory fields, valid email and phone formats, appropriate participant numbers, and selection of required event and registration details. The submitted data is displayed in the **Event_Registration_Report** for review and management.

Procedure

1. Open Zoho Creator and create the **Event Registration System** application.
2. Create the **Event_Registration_Form**.
3. Add the required fields for participant, contact, academic, event, and registration details.
4. Organize the fields into suitable sections.
5. Configure mandatory fields and apply the required validation rules.
6. Create the **Events** form and add event details such as Event Name, Event Date, Venue, Maximum Participants, and Event Status.
7. Establish a relationship between the Events and Registrations forms using the Event field.
8. Save and preview the form.
9. Enter sample participant details and submit the form.
10. Create the **Event_Registration_Report** and verify the submitted records.
11. Filter the records based on event name, registration status, and department for event management.

Output

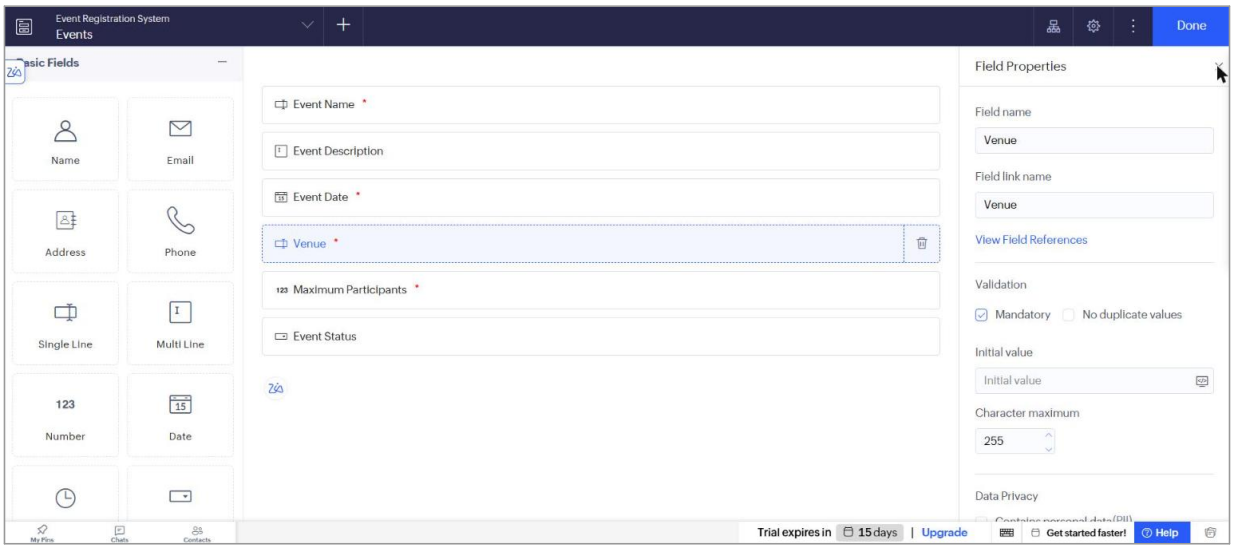

Fig. 4a.1: Events Form Design

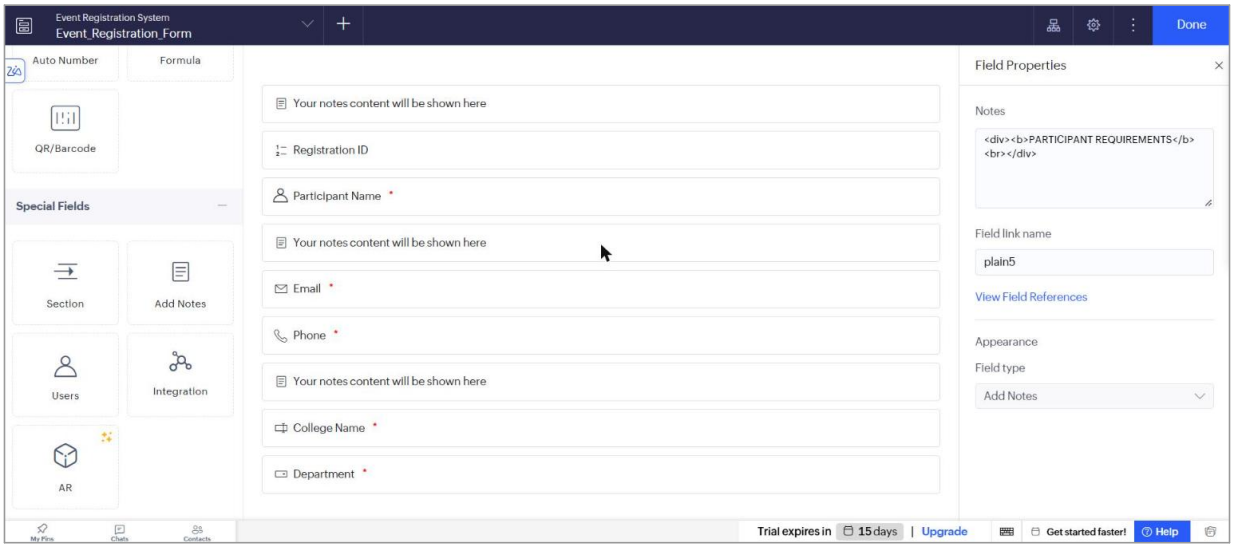

Fig. 4a.2: Event_Registration_Form Design with Fields

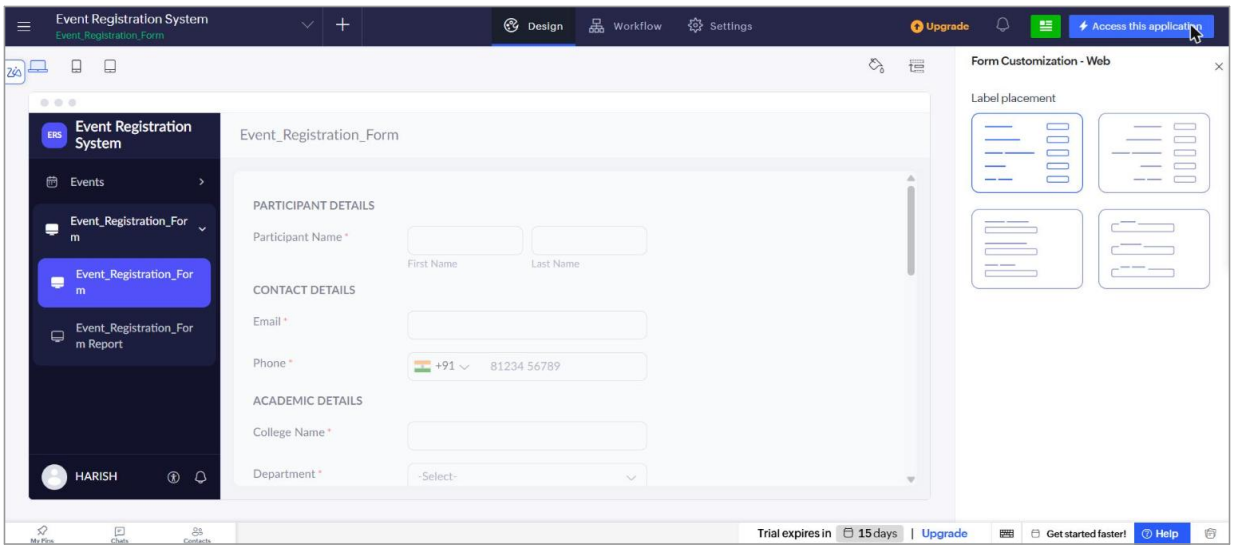

Fig. 4a.3: Event_Registration_Form organized into Sections

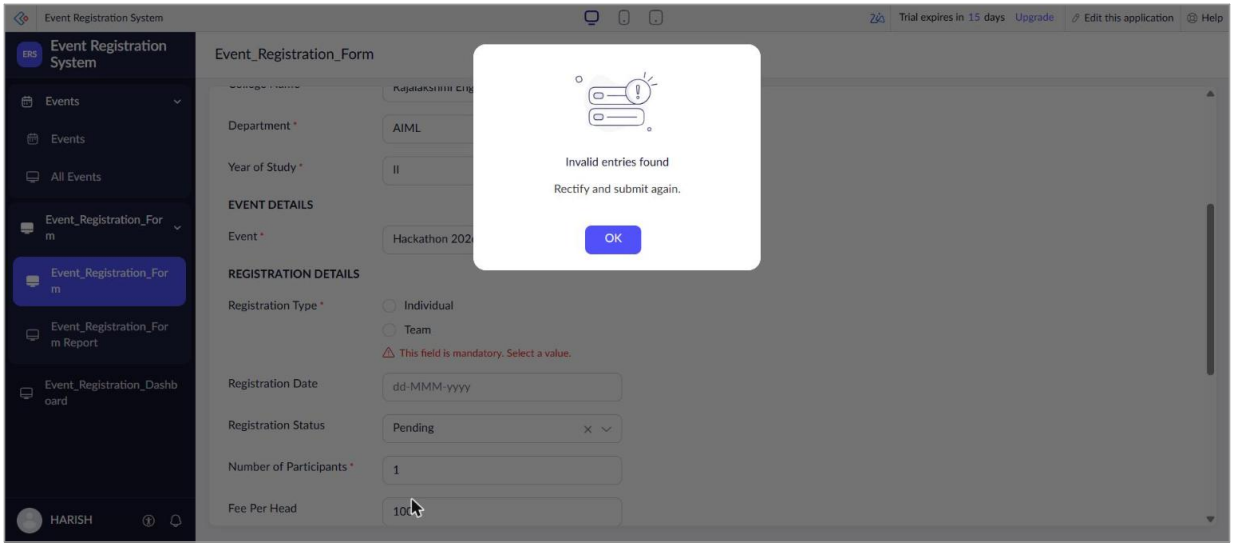

Fig. 4a.4: Validation of Mandatory Fields

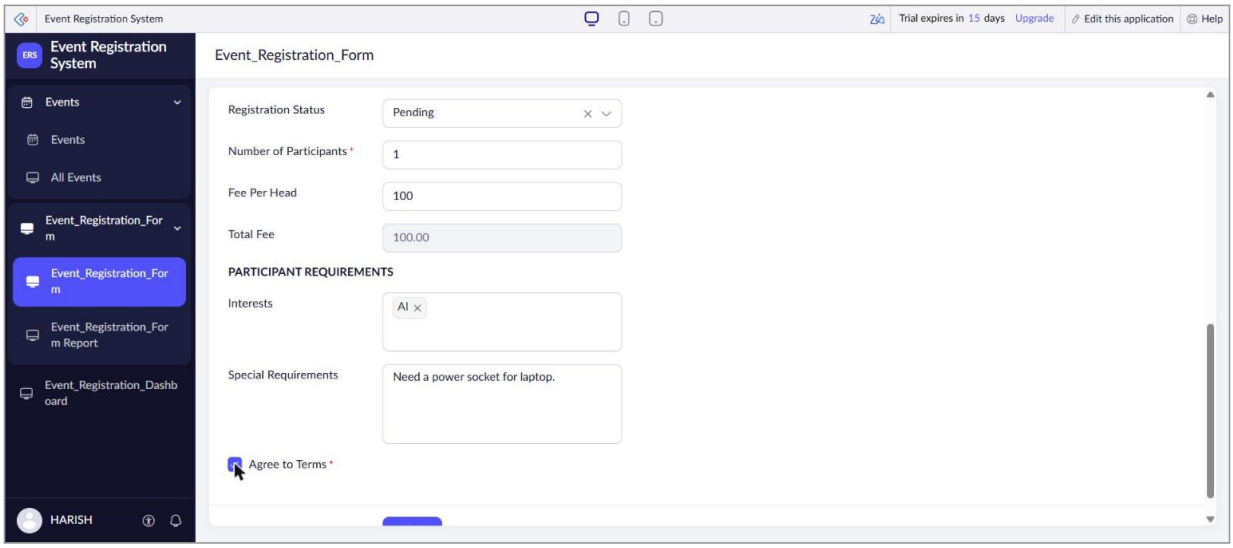

Fig. 4a.5: Sample Participant Details Entered

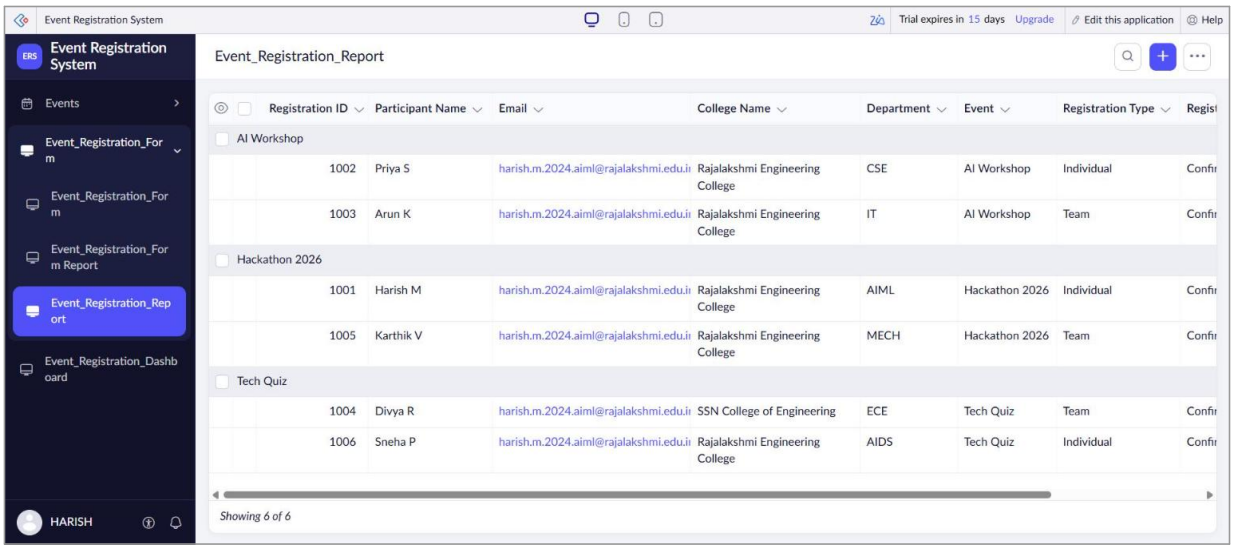

Fig. 4a.6: Event_Registration_Report showing Submitted Records

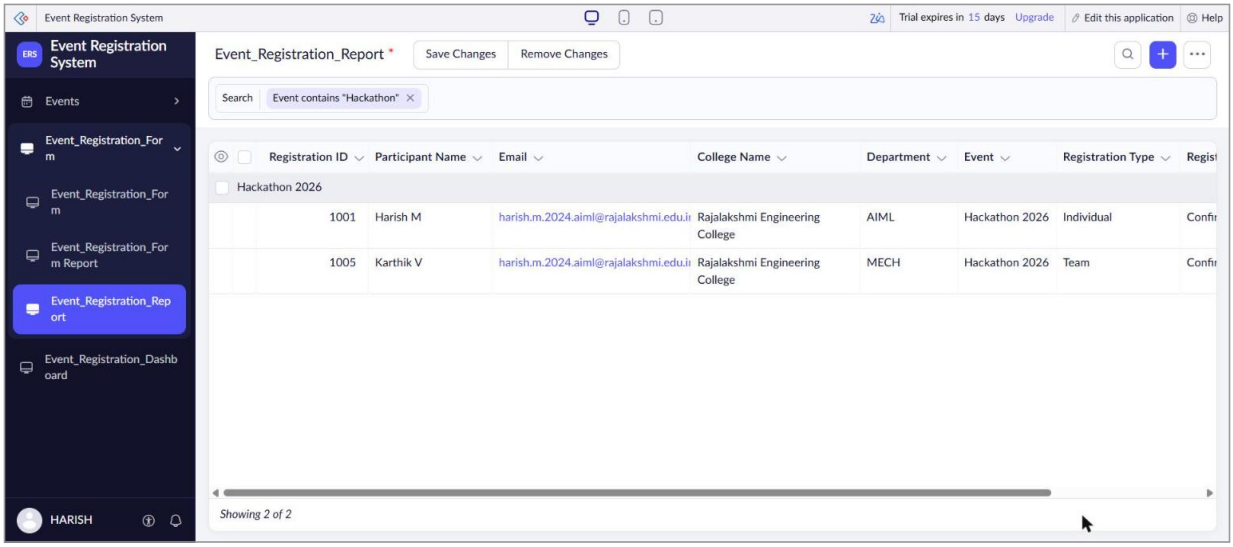

Fig. 4a.7: Records Filtered by Event Name

Result

The Event Registration Form was successfully created in Zoho Creator with a structured data model, appropriate field validations, and organized sections. The submitted registrations were successfully stored and displayed in the Event_Registration_Report for effective review and management.
