Dashboards

Aim

To create and configure a dashboard in Zoho Creator for visually representing and analyzing event registration data using charts, summaries, and reports.

Theory

Dashboards in Zoho Creator provide a visual representation of application data using components such as charts, panels, reports, and summary views. They help users understand stored data quickly and support effective monitoring and analysis.

In this experiment, an **Event_Registration_Dashboard** is created using the registration data collected through the Event Registration Form. The dashboard displays important registration information such as total registrations, registrations by event, registration status, and department-wise registrations using suitable visual components.

Procedure

1. Open the Event Registration System application in Zoho Creator.
2. Navigate to the Dashboard or Page Builder section.
3. Create a new dashboard named **Event_Registration_Dashboard**.
4. Add a summary component to display the Total Registrations.
5. Add a chart to display registrations based on Event Name.
6. Add a chart to display registrations based on Registration Status.
7. Add a chart to display registrations based on Department.
8. Add the Event Registration Report to display recent registration records.
9. Configure suitable chart types, labels, and data sources for each component.
10. Arrange the dashboard components in a clear and organized layout.
11. Save and preview the dashboard.
12. Verify that the dashboard displays the registration data correctly

Output

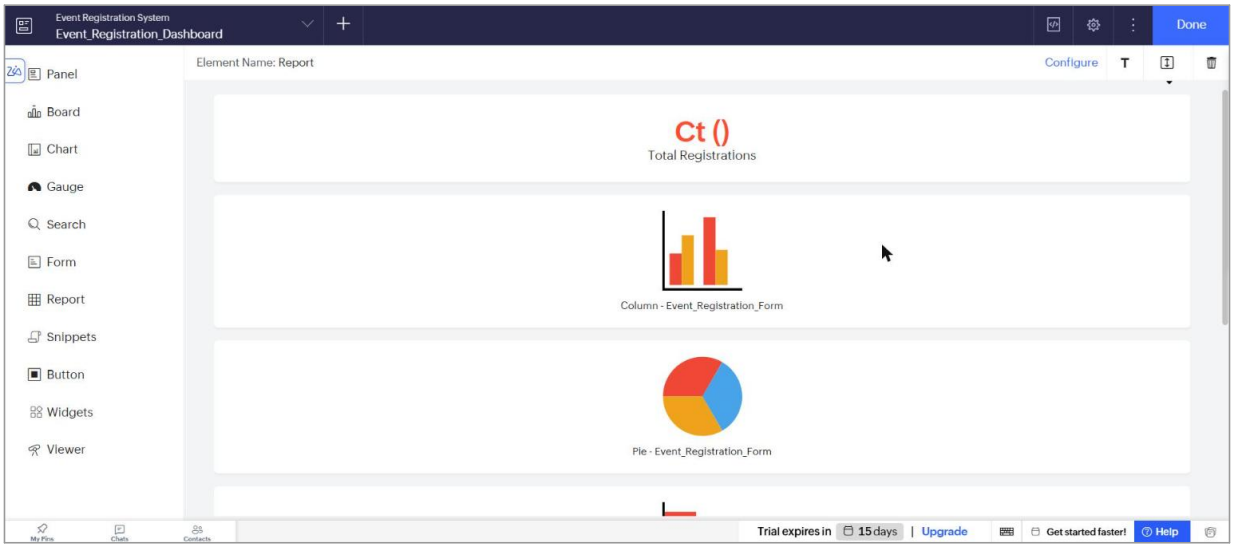

Fig. 5b.1: Dashboard Design in Page Builder

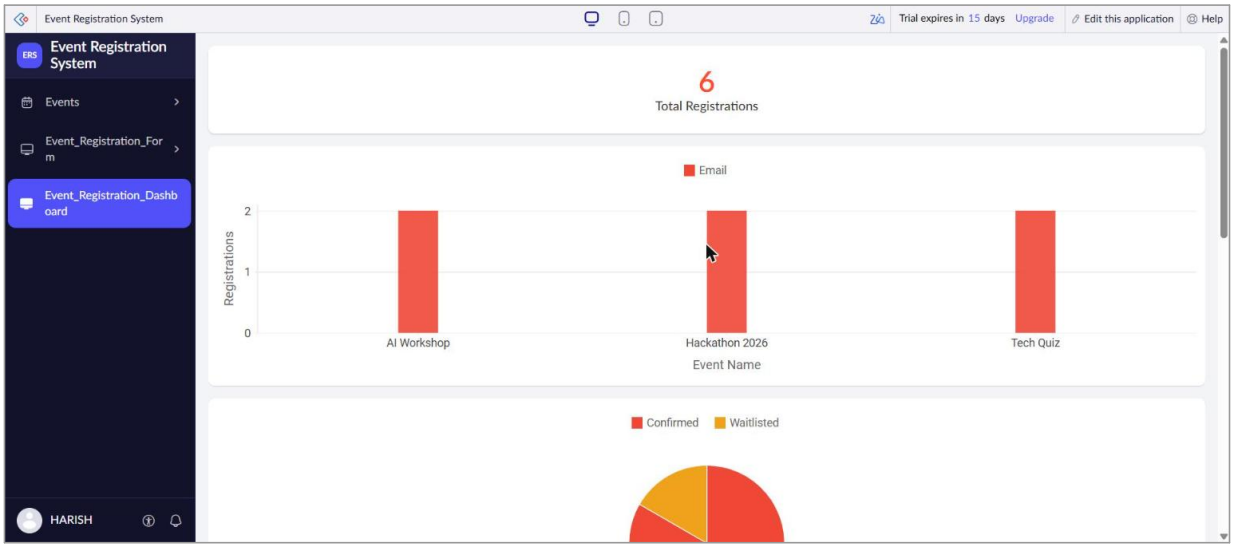

Fig. 5b.2: Total Registrations and Registrations by Event

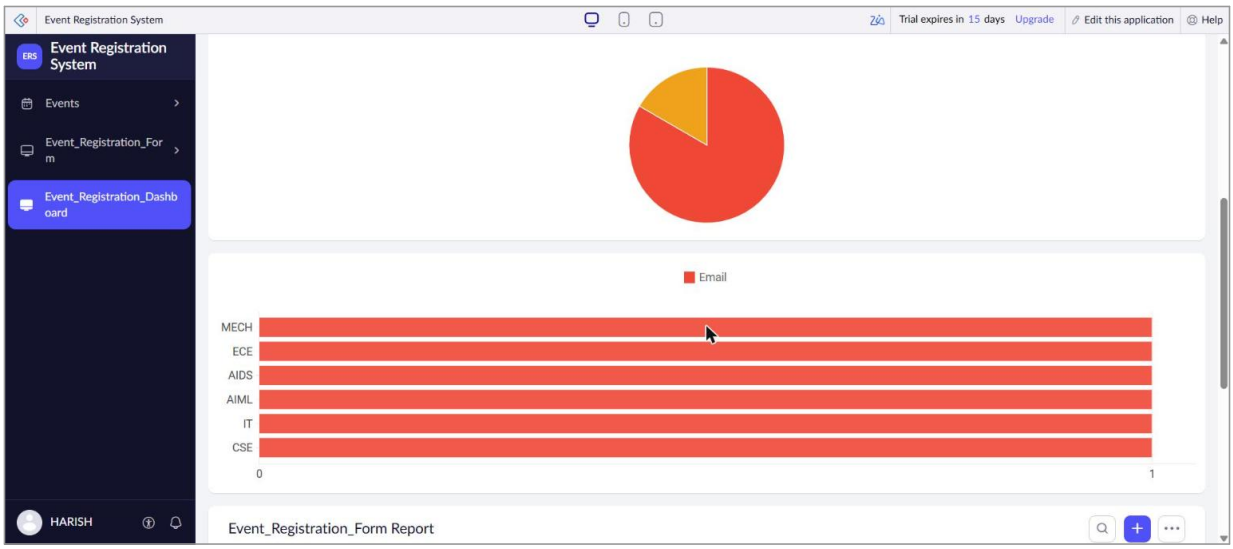

Fig. 5b.3: Registrations by Status and by Department

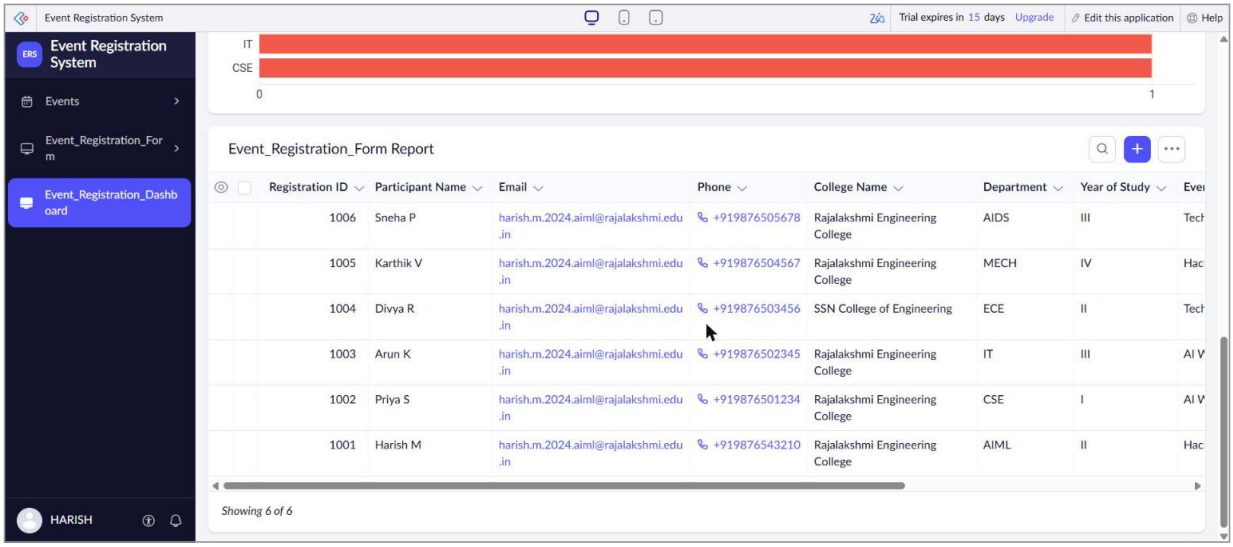

Fig. 5b.4: Registration Report Embedded in the Dashboard

Result

The Event_Registration_Dashboard was successfully created in Zoho Creator. The dashboard visually represented event registration data using summary information, charts, and reports, enabling effective monitoring and analysis of registrations.
