EXP 8	**User management, Role-Based Access Control (RBAC), and security configuration in Zoho Creator**

Aim:

To configure user management, role-based access control (RBAC), and security settings in the **Event Registration System** using Zoho Creator, so that each type of user can access only the data and actions allowed for them.

Theory:

User management is the process of adding users to an application and deciding what each user can see and do. Role-Based Access Control (RBAC) gives access based on the role of a user instead of giving rights to each person one by one. This keeps the application safe and easy to manage.

In Zoho Creator, security is set up from **Settings > User Permissions**. It has three main parts:

- **Permissions (Profiles):** A permission set decides which forms, reports and pages a user can Access, View, Edit or Delete. Default profiles such as **Read** and **Write** are available.
- **Roles:** Roles form a hierarchy (for example CEO > Event Coordinator > Participant). A higher role can see the records owned by the roles below it.
- **Data Sharing:** Data sharing rules decide whether records are shared with peers or only with higher roles.

For the Event Registration System, three types of users are needed: the **CEO / Admin** who manages everything, the **Event Coordinator** who manages events and registrations, and the **Participant** who can only register for events.

Procedure:

1. Open Zoho Creator and open the **Event Registration System** application in Edit mode.
2. Click **Settings** and open **User Permissions**.
3. Open the **Permissions** tab and view the default Read and Write profiles.
4. Click **Add Permission Set**, name it **Event Coordinator**, and tick Access, View and Edit for the Events form and the Event_Registration_Form, and View for the reports.
5. Open the **Roles** tab and view the default role hierarchy.
6. Click **Add Role** and create the **Event Coordinator** role reporting to **CEO**.
7. Create the **Participant** role reporting to **Event Coordinator**.
8. Open the **Data Sharing** tab and check the sharing settings for the forms.

9. Review the final role hierarchy and permissions.

Output:

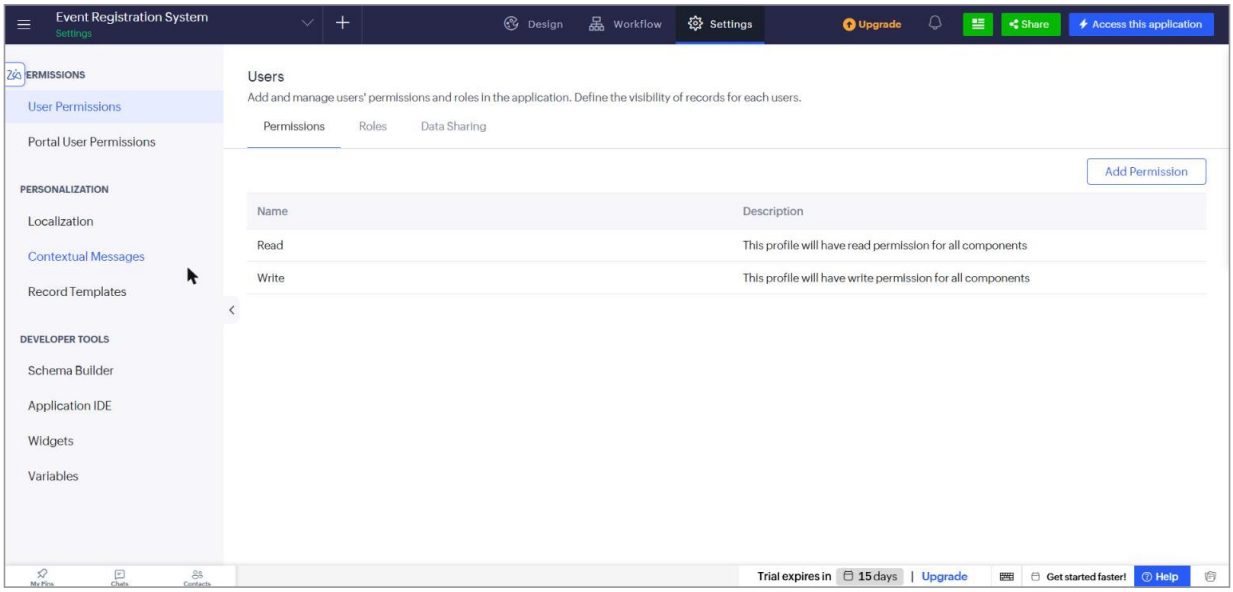

Fig. 8.1: User Permissions - Default Permission Profiles

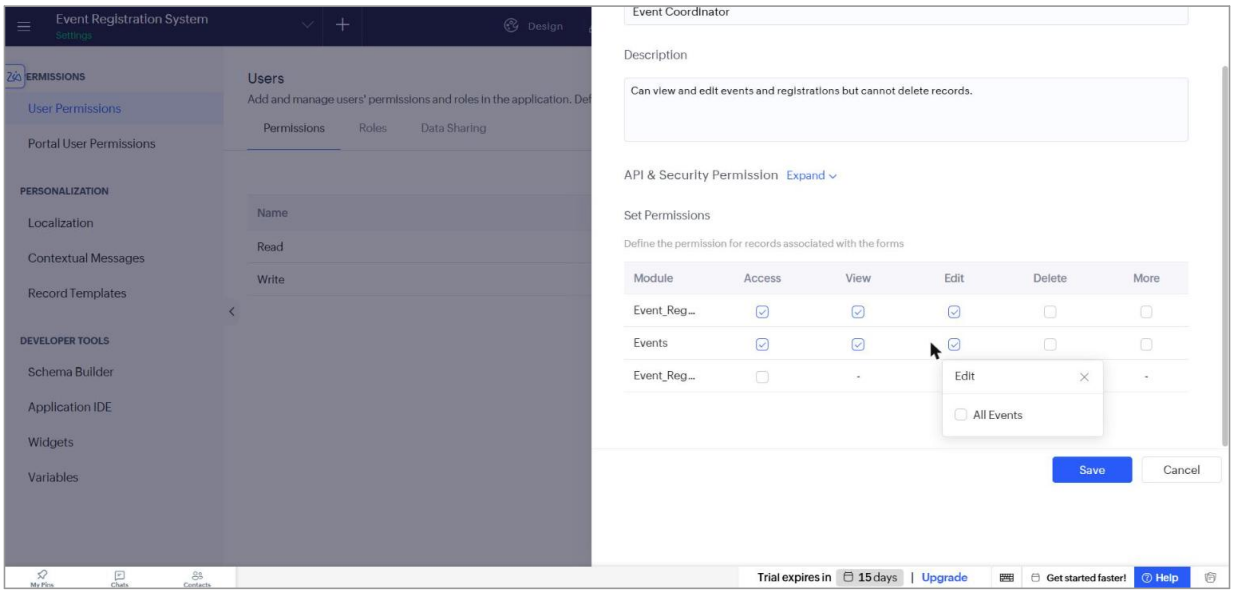

Fig. 8.2: Adding the Event Coordinator Permission Set

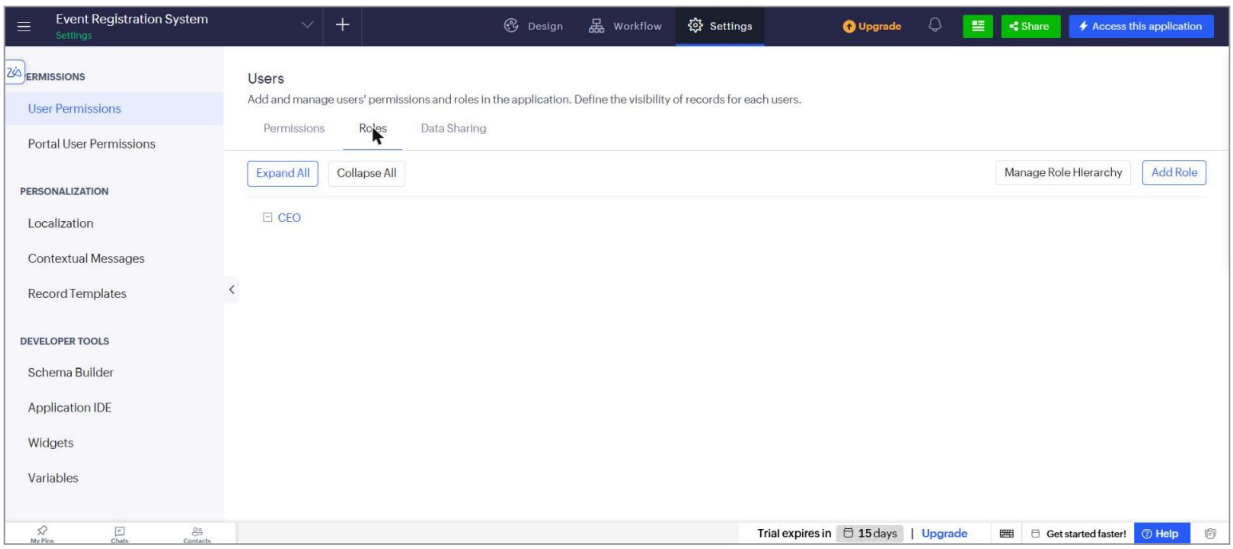

Fig. 8.3: Default Role Hierarchy

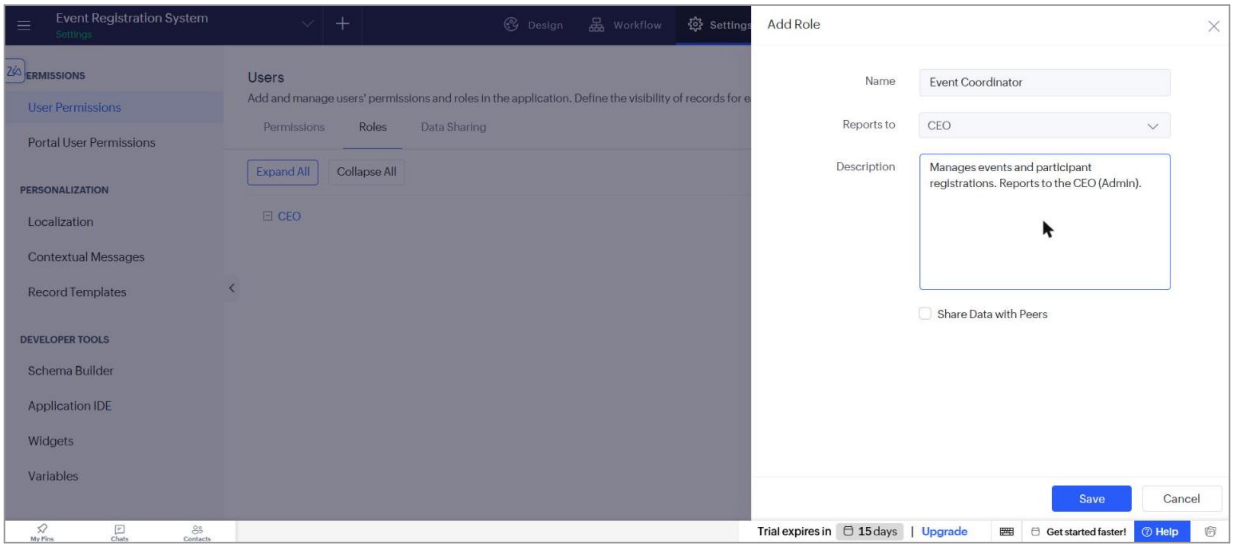

Fig. 8.4: Adding a New Role

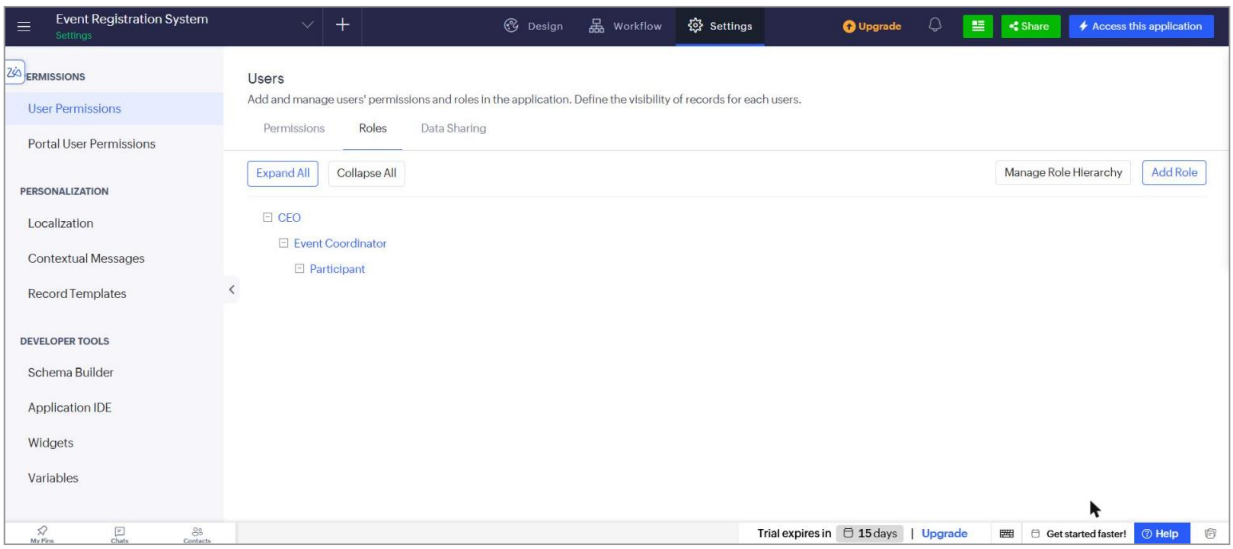

Fig. 8.5: Role Hierarchy for the Event Registration System

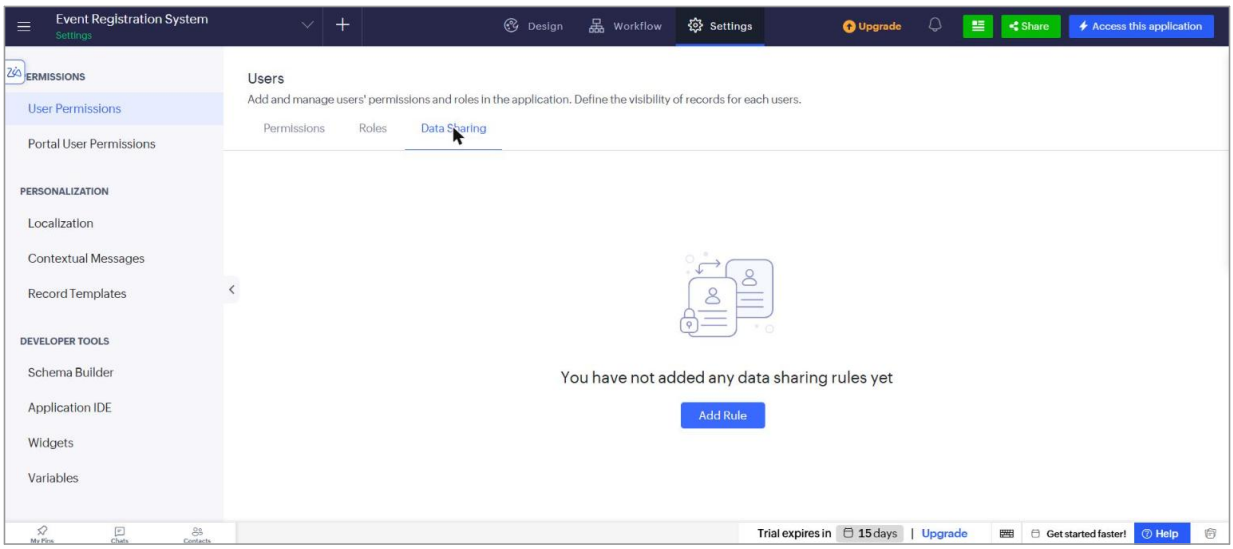

Fig. 8.6: Data Sharing Settings

Observation:

Role	Reports To	Access in the Application
CEO	-	Full access to all forms, reports, pages and settings
Event Coordinator	CEO	Add, view and edit events and registrations; view reports and dashboard
Participant	Event Coordinator	Submit the registration form and view own registrations

Note: The Event Coordinator permission set was filled, but it could not be saved because of the limits of the trial plan of the account. The roles and the role hierarchy were created successfully.

Result:

User management and role-based access control were configured in the Event Registration System. Roles were created in a proper hierarchy and permissions were planned for each role, so that each user can access only the data allowed for their role.
